

SFM 1080

Solar Powered Fuel Maintenance System

The SFM Series Solar Powered Intelligent Fuel Maintenance System is designed to optimize and maintain diesel fuel indefinitely by removing particulate and water in stored fuel. Powered by a solar panel and 12V DC battery, this innovative process stabilizes diesel and bio-fuels, eliminates microbial contamination, and ensures clean reliable fuel at all times. The SFM Series Solar Powered Intelligent Fuel Maintenance System is ideal for stored fuel in remote locations where grid power isn't readily available.

Fuel has a limited shelf-life, and even "fresh fuel" could contain water, sediment, and microbes upon delivery. With the extreme conditions stored fuel is commonly enduring, it is critical to ensure fuel is maintained on a regular basis.

SFM Systems reverse fuel deterioration while decontaminating, cleaning, and optimizing the fuel to ultra clean levels for ultimate reliability.

SFM Series Systems are designed around a self-priming 80 GPH nickel-plated brass gear pump. Quality filtration components are connected using corrosion-resistant Stainless Steel plumbing. A pressure gauge is installed on the filter housing to ensure optimal filter usage by showing remaining filter life. Available filter elements include stainless steel mesh filter, particulate, and water block elements.
